

ABSTRACT

According to at least one of the disclosed embodiments of the present invention, there is provided a diagnostic assembly for use with computers, computer components, computer systems or networks, and includes a pair of side panels, each having mounting means or device for engaging a support member or bracket. In one embodiment, the portable diagnostic assembly further includes a horizontal support plate engaging portions of each of the side panels. A diagnostic module is disposed or mounted on the horizontal support plate and is adapted to communicate with at least one of a computer, computer component, computer system and network to be diagnosed.
